

# CHARCOAL PILE

## Pile opening

OPENING AT THE TOP OF THE CHIMNEY

## Layer of soil

ABOUT 10 CM THICK

## Layer of leaves

8-10 CM THICK

to isolate the charcoal pile,  
creating an **oxygen-poor** internal  
environment

## Central stake

FROM WHICH THE CONSTRUCTION  
OF THE PILE STARTS

## Chimney

## Logs

crammed around the central chimney so as  
to leave no gaps: near the centre are the  
thicker ones and then, above these,  
progressively thinner ones.

## Holes

to regulate the amount of oxygen in  
the charcoal pile and allow the  
smoke to escape
